Virtual Appliances

“Virtual Appliances can help save you hours of work and get your project off to a good start with very little effort.”

Vista Migration Test Bed & Support Tools

Implementing Windows Vista is a project that requires both technical and administrative resources. One of the first things technicians require is a working laboratory—an environment where they can begin to test and discover the feature set of the new operating system. Ideally, technicians will begin this process while other, administrative elements of the project are being put in place. This parallel workload approach provides fast and proven results since technicians can work on the preparation of the technical solution while other elements of the organization cover logistics and get the project rolling.

Resolutions helps accelerate Vista Migration Projects by providing a complete project environment that includes both administrative support tools—which help get the project going—as well as a complete technical laboratory and testing environment. Resolutions' Vista Migration Test Bed & Support Tools includes everything your organization needs to quickly get the project off the ground:

- Project Support Tools such as:
 - Project Plan Template
 - Business Case Template
 - Project Workspace under Windows SharePoint Services
- Laboratory Coordination Support Tools such as:
 - Deviance Registry
 - Laboratory Calendar
 - Laboratory Testing Sheets
- Test Bed including the following Test Levels:
 - Unit Testing (three starter virtual machines both servers and workstations)
 - Functional Testing (three starter virtual machines both servers and workstations)
 - Integration Testing (five server machines in a domain plus three workstation roles)
 - Staging Testing (nine server machines in a domain and two sites plus three workstation roles)

(over...)

Don't wait. Act now and save as you prepare for a Windows Vista Migration.

- Detailed Installation Documentation for items such as:
 - Virtual Machine Construction and Configuration
 - Administrative Processes for Lab Management
 - Virtual Machine Repurposing
- Administration Tools
 - Virtual Machine Administration Console
 - Virtual Machine Manager
 - Migration Support Tools of your choice
- Virtual Machine Pre-Population:
 - User Accounts
 - User Groups
 - Access Control Lists and System Permissions
 - Organizational Units
 - Remote and Central Sites
 - Router Simulation and more...

All virtual machines are build using private product keys and are customized to your organization's environment and standards. The entire environment is built and delivered directly to your doorstep. Installation and activation can be done in minutes saving you considerable time and effort as you gear up for the migration project.

Pricing is available on request.
