Preface, xix

Acknowledgments, xxi

Introduction, xxiii

Chapter 1	Planning for Windows Server 2003	1
	Windows Server 2003	2
	Building the Foundation of the Network	3
	The Server Lifecycle	4
	The Service Lifecycle	5
	A New Model for Server Construction and Management	8
	The Benefits of the PASS Model	11
	A Structured Approach: Using Standard Operating Procedures	12
	SOP Best Practices	13
	Enterprise Network Architectures	14
	Building on Windows 2000: The WS03 Model	15
	Product Activation	17
	The Windows Server Enterprise Architecture	18
	Designing the Enterprise Network Architecture	19
	The Architectural Design Process	20
	Performing a Situation Review and Needs Analysis	22
	The Changing Role of Servers	22
	Consolidating Servers with Windows Server 2003	23
	Using the PASS Model	24
	Migration Considerations	27

	Upgrade versus Clean Installation	28
	Using the Technological Lab as a Testing Ground	29
	Moving On	32
	Best Practice Summary	33
	Chapter Roadmap	33
Chapter 2	Preparing for Massive Installations of Windows Server 2003	36
	Choosing the Migration Approach	37
	Choosing What to Migrate First	39
	Detailed Inventories	44
	Security Considerations	45
	Licensing Considerations	46
	Installing and Configuring Servers	47
	Preparing for Massive Installations	47
	Using Installation Documentation	54
	The Installation Preparation Checklist	54
	Documenting Server Installations	54
	The Post-Installation Checklist	55
	Massive Installation Processes	56
	The Initial Installation	57
	Customizing Your Server	60
	Choosing the Massive Installation Method	65
	Scripting Upgrades	66
	Disk Imaging	67
	Remote Installation	70
	Putting the Server in Place	75
	Best Practice Summary	75
	Chapter Roadmap	76
Chapter 3	Designing the Active Directory	78
	Introducing Active Directory	79
	New Features for Active Directory	83
	The Nature of Active Directory	85

Designing the Solution: Using the Active Directory Blueprint	87
AD Partitioning	88
AD Service Positioning	88
Implementation Plan	89
Putting the Blueprint into Action	89
Forest/Tree/Domain Strategy	91
Forest Design Example	94
Production Forest Design	95
Domain Strategy Design	97
Other Forest Domain Designs	100
Forest Design Best Practices	100
Designing the Naming Strategy	101
Naming Best Practices	102
Designing the Production Domain OU Structure	104
The OU Design Process	104
The PCs Object OU Structure Design	107
The Services Object OU Structure Design	107
The People Object OU Structure Design	108
Replicating the OU Structure to Other Domains	109
Production OU Design Best Practices	109
AD and Other Directories	112
Microsoft MetaDirectory Services	113
Integrated Applications for NOS Directories	114
AD Integration Best Practices	115
Service Positioning	116
Operation Masters Positioning	116
Global Catalog Server Positioning	118
Domain Controller Positioning	119
DNS Server Positioning	119
Service Positioning Best Practices	120
Server Positioning Scenario	120
Site Topology	127
Site Topology Design	128

	Creating Site Link Bridges	128
	Best Practices for Site Topology Design	130
	T&T Corporation's Site Topology Scenario	130
	Schema Modification Strategy	133
	Schema Modification Strategy Best Practices	135
	AD Implementation Plan	135
	The Ongoing AD Design Process	137
	Best Practice Summary	137
	Chapter Roadmap	138
Chapter 4	Designing the Enterprise Network IP Infrastructure	140
	TCP/IP in Windows Server 2003	142
	New IP Features in WS03	143
	Implementing a New Enterprise Network	147
	Preparing the Parallel Network	148
	Creating the Production Active Directory	152
	Forest Staging Activities	154
	Installing the First Server in a Forest	154
	Creation of the Second DC in the Forest Root Domain	167
	Creation of the First DC in the Global Child Production Domain	171
	Creating the Second DC in the Global Child Production Domain	173
	Connecting the Enterprise Network	176
	Network Infrastructure Staging Activities	176
	Server Installation and Configuration	176
	Configuring the First Network Infrastructure Server	177
	Configuring the Second Network Infrastructure Server	185
	Moving Servers and Configuring Domain Replication	185
	Upgrading Active Directory from Windows 2000 to WS03	189
	The Upgrade Process	189
	Ongoing Forest Management	194
	Best Practice Summary	194
	Chapter Roadmap	196

Chapter 5	Building the PC Organizational Unit Infrastructure	198
	Managing Objects with Active Directory	199
	Group Policy Concepts	199
	Group Policy Processing	201
	GPO Inheritance (and Blocking)	202
	Policy Loopback	205
	Policy Filtering	207
	Fast Logon Optimization	209
	Policy Design	210
	Designing a GPO Strategy	212
	GPO Application and Processing Speed	212
	Creating an OU Design for PC Management Purposes	214
	Centralized PC Administration	214
	Decentralized PC Administration	219
	Designing for Delegation	220
	Delegation in Active Directory	221
	Designing a Delegation Strategy	225
	Enterprise PC Management	225
	Software Installations with WS03	226
	Enterprise Software Assets	228
	Software Delivery in the Enterprise	229
	Completing the OU Strategy	234
	Putting the PCs OU Infrastructure in Place	235
	Using the Group Policy Management Console	239
	Best Practice Summary	240
	Chapter Roadmap	242
Chapter 6	Preparing the User Organizational Unit Infrastructure	244
	Managing User Objects with Active Directory	245
	The Active Directory User Object	246
	Using Template Accounts	254
	Massive User Management	255

	Managing and Administering Groups	257
	WS03 Groups Types and Group Scopes	258
	Best Practices for Group Management/Creation	260
	Creating an OU Design for User Management Purposes	266
	The People OU Structure	266
	User-Related GPO Concepts	269
	Completing the People OU Structure	279
	Putting the People OU Infrastructure in Place	280
	Best Practice Summary	282
	Chapter Roadmap	283
Chapter 7	Designing the Network Services Infrastructure	286
	Preparing File and Print Servers	288
	Sharing Files and Folders	288
	Expanding Disks for File Storage	289
	Disk Structure Preparation	290
	Creating the File Server	296
	Creating the Folder Structure	297
	Enabling File Server Services	298
	Sharing Folders	301
	Publishing Shares in Active Directory	302
	Finding a Share in AD	304
	Managing Folder Availability	305
	Distributed Link Tracking	305
	Working with the Distributed File System	306
	Sharing Printing Services	312
	WS03 Printer Drivers	313
	Integration with Active Directory	314
	Managing Printer Permissions	316
	Internet Printing Protocol	316
	Establishing a Shared Printer Policy	317
	Creating the Print Server	319

Sharing Files and Printers for Non-Windows Clients	323
Macintosh Computers	323
UNIX Integration	324
Preparing Application Servers	324
Sharing Applications: Commercial and Corporate	324
Preparing Terminal Servers	329
Sharing Applications: Terminal Services	329
Collaboration Servers	337
Additional Network Infrastructure Server Functions	337
Preparing Remote Installation Services Servers	337
Server System Requirements by Role	339
Designing the Services OU Structure	340
Considerations for the Migration of Services to the Parallel Network	343
Best Practice Summary	344
Chapter Roadmap	346
 Chapter 8 Managing Enterprise Security	 348
Security Basics	349
Designing a Security Policy	351
The Castle Defense System	351
The Security Plan	355
The Microsoft Security Operations Guide	356
Windows Server 2003 Security	357
Applying the Castle Defense System	359
Level 1: Critical Information	360
Level 2: Physical Protection	361
Level 3: Operating System Hardening	362
System Security Configuration	363
Security Template Best Practices	373
Antivirus Strategies	374
General Active Directory Security	375
File System Security	378

	Print System Security	380
	.NET Framework Security	380
	Internet Information Server 6.0	384
	Final Operating System Hardening Activities	386
	Level 4: Information Access	387
	Smart Card Authentication	387
	Securing User Identification	388
	Managing Trusts	394
	Web Server Access Control	396
	.NET Framework Authentication	398
	Access Audition and Monitoring	399
	Level 5: External Access	399
	Designing an Internal Public Key Infrastructure	400
	Managing the Security Policy	403
	Best Practice Summary	404
	Chapter Roadmap	406
Chapter 9	Creating a Resilient Infrastructure	408
	Planning for System Redundancy	409
	Preparing for Potential Disasters	411
	Using WS03 Clustering Services	412
	Network Load Balancing	414
	Multiple-Node Server Clusters	420
	Server Consolidation	425
	Consolidation Through Server Baselineing	426
	Planning for System Recovery	428
	Recovery Planning for the Enterprise Network	428
	Data Protection Strategies	433
	Finalizing Your Resiliency Strategy	441
	Best Practice Summary	441
	Chapter Roadmap	443

Chapter 10	Putting the Enterprise Network into Production	446
	Migrating Data, Users, and PCs to the Parallel Network	447
	Using the Active Directory Migration Tool	450
	Transferring Networked User Data	454
	Decommissioning the Legacy Network	457
	Revising the IT Role Structure	457
	New and Revised AD IT Roles	458
	Designing the Services Administration Plan	460
	WS03 Administrative Tools	464
	Final Recommendations	466
	Best Practice Summary	467
	Chapter Roadmap	467
	 Index	 469
